HOME STYLE PATTERN BOOK
Mission Revival
A Spanish Colonial Selection from the Andersen Style Library
THE ANDERSEN® ARCHITECTURAL COLLECTION

The Architectural Collection is an industry-leading, innovative approach to windows and doors that’s based not on the type of window or door, but rather on the style of home you want to create.

Consisting of Andersen® A-Series and E-Series products, the collection offers two approaches to attaining authentic architectural style.

A-Series products were designed in conjunction with leading architects. These windows and doors feature a unique system of options that work seamlessly together, allowing you to produce virtually any style with ease.

E-Series windows and doors are made to your exact specifications and give you unmatched design freedom within the architectural style you’ve chosen. They allow you to create dramatic shapes and sizes, and feature 50 standard colors, custom colors, plus a wide range of interior wood species.

With the Architectural Collection, you have the tools that make it easier to design and build today’s most popular, time-proven architectural styles.
Since ancient Roman times, architects have relied on the use of pattern books to outline the principles and formulas of architectural styles.

These early documents recorded the building patterns that were deemed to be best, and were important tools for architects of the day in their communication with other architects, as well as builders, clients, rulers and politicians.

Today, there is a renewed interest in pattern books as planners and developers look to build new communities by learning from the successes of the past. Andersen is committed to making this type of great architectural design more attainable through our products, tools and services.

The result of years of research, pattern books from the Andersen Style Library present the quintessential architectural details of the most popular American home styles, with an emphasis on window and door design options. With these books, Andersen makes it easier for architects, builders and homeowners to communicate with a common language, and to confidently design, build and live in a home of distinction.

The Mission Revival Home

Inspired by Spanish mission churches built in the early 1600s, Mission Revival style architecture first appeared in California in approximately 1885. By the mid 1890s, the style had spread throughout the American Southwest, due in part to the Santa Fe and Southern Pacific Railroads. They had built a series of train stations and resort hotels throughout the southwest based on the style. Mission Revival style architecture enjoyed further attention in 1893 when the California Building at the World’s Columbian Exposition in Chicago was built in this style.

In California, however, the style flourished primarily because it was original and uninfluenced by east coast architecture that had been brought westward as a result of the 1849 Gold Rush.

Instead of the finely detailed styling of eastern United States architecture, the Mission Revival style was a splash of boldness. With its large, arched openings and unadorned expanses of whitewashed stucco, it was a statement of both independence and beauty. A statement that still has a strong voice in American architecture today.
MISSION REVIVAL

ESSENTIAL STYLE ELEMENTS

- Gables with curvilinear parapet walls
- Low-pitched, red tile hipped roofs
- Open eaves with exposed brackets
- Prominent one-story porches with arched openings
- Often a tower or a form suggestive of a tower
- Visor roofs common below dormers or parapets
- Typically two stories with smooth, usually white, stucco

EXTERIOR COLOR PALETTE

- Coffee Bean
- Colony White
- Sandtone
- Mallard Green
- Slate
- Cinnamon Toast
- Black

Printing limitations prevent exact color duplication. Please see your Andersen supplier for actual color samples.

Quintessential Windows

Both double-hung and French casement windows are common in Mission Revival style homes. Occasionally both window types can be seen in the same house.

When double-hung windows are used, grilles usually divide the upper sash into individual panes that are square or close to square. Typical arrangements are 9-over-1, 6-over-1 and 12-over-1.

Regardless of window type, main floor windows are usually taller than upper story windows. To meet egress code requirements in most areas, double-hung windows may need to be replaced with casement windows.

**ANDERSEN AUTHENTICITY**

Andersen offers a 2 ¼” wide grille that can be positioned horizontally across a casement window to simulate the check rail on a double-hung window.

*Andersen Windows*

Quintessential Doors

The main door is often a simple plank entrance door with either an arched or a flat top. Main doors are usually single doors.

Mission Revival style homes may also feature many side doors that provide access to porches and verandas. These doors are often similar in appearance to the main door, although they may be narrower or shorter. French doors are usually used to provide access to porches and verandas, creating a visual connection between the interior and exterior.

Both main entry and side doors are commonly set deep within the wall from the exterior, which emphasizes the wall’s thickness.

Hardware is accentuated and usually appears to be hand forged, making heavy iron hinges and hardware appropriate. Doors also often have a peephole or a small window covered with iron grillwork.
Colors & Finishes

Windows are frequently dark brown or another earthy color that contrasts with the usually white stucco walls. However, a variety of colors may be used for trim. While the window frame and trim are typically the same color, the sash is sometimes a different color. When a different color is used for the sash, it is typically a dark color.
## Color Combinations

**ANDERSEN AUTHENTICITY**

For added flexibility, Andersen® E-Series windows are available in custom colors, making it easy to match your other exterior building materials, vary colors to suit your taste and to complement your color palette.

To match existing interiors, E-Series products allow you to specify virtually any wood species in a range of finishes. Or choose a custom stain for an exact match.

Note: This chart is intended to show general color combinations whether the sash and frame are the same color, and the trim is a unique color or the trim and frame are the same color and the sash is a unique color.
Primary Windows

The majority of Mission Revival style homes have double-hung windows. They are most commonly used as individual, standalone windows, but may also be grouped in various combinations. Double-hung window proportions typically range between 1:1.3 and 1:8.

French casement windows are also common, either replacing double-hung windows in some homes, or being used with double-hung windows within the same house. These windows typically range from 1:1 to 1:1.3.

Guidelines for primary windows are as follows:

- All windows in Mission Revival style homes are vertically proportioned with the exception of accent windows (see “Accent Windows” on the next page)
- Individual glass panes are square or close to square and are equally sized or within 12% of each other
- Main floor windows are often taller than the windows on upper floors

Andersen® Architectural Collection windows are available in custom sizes. Both the primary windows shown here and the accent windows shown on the next page can be ordered to the specifications your Mission Revival style designs require.
Accent Windows

Mission Revival style homes offer opportunities for a variety of accent windows. Windows with arches are particularly common and may be of several window types, including casement, French casement, picture and double-hung windows. Both large and small sizes may be used as focal points and accents. Arched casement, double-hung, and picture windows are proportioned in the range of 1:2 to 1:3.

Other common accent window shapes include quatrefoil, circle, half circle, and horizontal oval. Often, these accent windows are surrounded by stone trim. They are sometimes used as a single pane, but they can also be divided into other patterns with grilles. They are most frequently placed in the curvilinear gable walls that are commonly found in Mission Revival style homes. However, these smaller accent windows can be used in almost any wall surface.

QUINTESSENTIAL ACCENT WINDOWS

- Arched French casement window
- Arched single or double-hung window
- Fixed extended half circle accent window
- Quatrefoil window
- Half circle transom window
- Circle window
- Oval window (shown horizontally)
Window Groupings

The most common double-hung window grouping consists of two or three units grouped side-by-side. A variation on this approach is three double-hung windows grouped together with a center window that’s wider than the two flanking windows. The windows are separated by a wide mull spacing in order to mimic the weight pocket area found on historical double-hung windows. These groupings are used on both the main and upper floors.

Another common grouping places an arched transom window above a casement, a French casement or a double-hung window. In this configuration, a narrow mull is used between the windows to help create the effect of it being one single unit.

Occasionally, windows are grouped to create a semicircular arrangement (see next page). Most commonly, this arrangement has either two flattened arched casement windows or two flattened arched double-hung windows or a flattened arched French casement window in the center. These windows are then flanked by arched picture windows. The arches of the flanking windows continue the arch radius of the center windows so that the overall arrangement creates a semicircle. The windows are usually connected with a wider mull. Typically, this type of grouping is often found in the curvilinear gable wall of a large dormer.
Andersen offers authentic French casement windows without the center mullion to help create historically accurate Mission Revival style homes.

**TYPICAL TRIM CONDITIONS**

Window trim on Mission Revival style homes is minimal. Historically, since windows and doors were recessed into the exterior wall, standard 2" brick mould profile with a sill was typical. Sometimes the brick mould was eliminated and the exterior stucco finish returned into the frame. For homes with windows and doors that aren’t recessed, slightly larger flat trim can be used.
Sash & Grille Design

Since window grilles on Mission Revival style homes were historically narrow, ¾” grille widths look most authentic.

In the original Spanish Colonial Missions that served as the models for the Mission Revival style, glass size was limited. As a result, the small panes of glass were joined together by muntin bars into rows and columns within the sash. By the advent of the Mission Revival style, glass technology had advanced to the point that it was possible to have windows with a single, larger glass pane. Typically, these windows have smaller windows placed above them for a decorative effect.

*ANDERSEN AUTHENTICITY*

Andersen® E-Series windows feature the following sash and grille details for architectural authenticity:

- A deep glass setback for historical accuracy
- Grille profile faces are flush with the sash face to simulate the look of traditional wood muntins
- Exterior grille profiles simulate the look of putty glazing on a historic window

Andersen products allow you to specify custom grille patterns, making it easy to create an exact match in historical applications.
Grille Patterns

The upper sash of Mission Revival style double-hung windows is typically divided into individual panes by grilles, while the lower sash has no grilles. The individual panes are usually square or close to square. For windows of different sizes within the same home, pane sizes should vary by no more than 12%. Common arrangements are 9-over-1, 12-over-1, and 6-over-1.

French casement windows feature the same square panes found in double-hung windows. In some cases, grilles are used only at the top of the French casement’s sash to create two or three rows of smaller panes above a single larger pane, simulating the look of a double-hung window.
Door Proportions

Mission Revival style homes usually have single main doors. They are often wood plank doors and are either nail studded or feature decorative ironwork.

Side doors are usually similar to the main door but may be narrower and also shorter if the main door is tall.

Auxiliary doors that open to porches or verandas are usually French style in order to provide a visual connection between the interior and the exterior.

Main Entries with Trim

Main entry doors on Mission Revival style homes usually do not include windows and sidelights. However, they can be incorporated by using a door with a flattened arch flanked by sidelights that continue the arched radius, creating a grouping with an arched shape. As is the case with windows, entry doors are typically recessed into the exterior wall and trimmed with 2" brick mould.

Auxiliary Entries with Trim

Side doors are usually simplified, smaller versions of the main door with arched or flat tops. For flat top doors, flat top flanking windows can be added. French doors are typical for access to porches and verandas. Recessed doors traditionally use 2" brick mould trim.
**Window Hardware**

Window hardware is typically made of iron and is almost always black or very dark in color in order to reflect the handmade appearance of early Mission style hardware.

Door Hardware
Door hardware is often similar in appearance to window hardware. It may have a handmade look and is generally black or very dark in color.

Andersen offers a choice of main entry door hardware that beautifully complements Mission Revival style homes. Yuma®, Encino® and Newbury® hardware are all made of solid, forged brass for a substantial look and feel that is in keeping with Mission Revival style architecture. Plus, each is available in a range of finishes to fit your specific design.

DOOR HARDWARE FINISH OPTIONS

- Distressed Bronze
- Oil Rubbed Bronze

Printing limitations prevent exact finish replication. Please see your Andersen supplier for actual finish samples. Oil Rubbed Bronze is a "living" finish that will change with time and use.

Hardware sold separately.
Exterior Trim Style Elements

Mission Revival style homes with recessed windows have either 2" brick mould or stucco that returns into the frame. When windows aren’t recessed, simple 3 ½” flat casing is appropriate.

ALTERNATIVE EXTERIOR TRIM STYLE

Flat casing for head and jamb with an extended sill nose. Appropriate for applications where window is not recessed into wall.

Flat casing with backband for head and jamb with an extended sill nose. Appropriate for applications where window is not recessed into wall.
You can design your own custom trim profiles with E-Series products, plus match or contrast the trim of the windows and doors with any of 50 exterior colors, custom colors and anodized finishes.

For authentic Mission Revival styling, or to create a variance all your own, A-Series products provide a choice of three exterior trim profiles and three head trim options. A-Series exterior trim is available in 11 colors, so you can match or complement your window and door colors to create a variety of looks.

To learn more about Andersen trim options, visit andersenwindows.com/exteriortrim.
Interior Trim Style Elements

A variety of stylistic approaches were used in the interior of Mission Revival style homes. Interiors were most often treated with a Craftsman style or a Spanish Colonial Revival style. Influences of both of these styles are found in the exterior elements of the Mission Revival style. Occasionally interiors also featured other Colonial Revival styles such as Georgian and Federal.
